

January 2019

Dear Parents and Families of Dr. Tanner G. Duckrey School,

I am writing to share information about an exciting investment happening in our school.

Our school will receive \$285,000 in site improvements that will help manage stormwater on our property, and in our community. This project includes the removal or updating of surfaces or drainage areas around the school. Replacement to our current materials will allow water to pass through them more efficiently.

This is an exciting and welcome environmental upgrade for our school. The work will be carried out during the day by Field Turf USA and George Ely. A Project Manager from the School District will be assigned to supervise the contractor to ensure minimal disruption to the school day.

I will notify you when the work is complete. For more information on our project visit our website at www.philasd.org/capitalprograms/programsservices/construction/capital-projects/.

Thank you for your patience, as we continue our mission to provide a safe learning environment for our children.

For questions, please send an e-mail to CapitalPrograms@philasd.org or call 215-400-4730.

Best,

David Cohen
Principal, Dr. Tanner G. Duckrey School
