April 29, 2019

Dear Kensington Health & Sciences School Community,

As a part of the School District of Philadelphia’s effort to provide students and staff with safe, accessible and appealing drinking water, 24 water outlets at your school were initially tested for lead on November 1st and 14th, 2018. Of those outlets, 20 outlets produced water that was below the action level of 10 ppb. Four (4) water outlets were found to have results above the water safety threshold and these outlets were immediately shut-off.

Below outlines the confirmed corrective action steps that were taken for those five water outlets that tested above the action limit.

<table>

Notes:
AA = Above Action limit of 10 ppb
BA = Below Action limit of 10 ppb
MDL = Method Detection Limit
Outlet Types:
WF=Water Fountain/Bubbler
HS=Hydration Station/Bottle Filling Station
FT=Faucet/Tap
PQL = Practical Quantitation Limit
J = Result estimated below the PQL
< = not detected above PQL
ppb = parts per billion

FP - Food Prep/Pot-Filler/Kitchen Kettle
IM - Ice-Maker

1Indicates a follow-up flush sample result. Standard protocol when retesting AA outlets is to collect a follow-up flush sample.

The School District will test the drinking water at your school every five years and share the results through a letter and also post the results on the District’s website. If you wish to review the results from your school and for more information, you may visit the District’s website at:
www.philasd.org/waterresults.

Sincerely,
Francine Locke, MS
Environmental Director
