April 29, 2019

Dear Sayre Middle School Community,

As a part of the School District of Philadelphia’s effort to provide students and staff with safe, accessible and appealing drinking water, 45 water outlets at your school were initially tested for lead on December 19th, December 21st, 2018 and January 3rd, 2019. Of those outlets, 39 outlets produced water that was below the action level of 10 ppb. Six (6) water outlets were found to have results above the water safety threshold and these outlets were immediately shut-off.

Below outlines the confirmed corrective action steps that were taken for those five water outlets that tested above the action limit.

**Notes:**
- AA = Above Action limit of 10 ppb
- BA = Below Action limit of 10 ppb
- MDL = Method Detection Limit
- PQL = Practical Quantitation Limit
- J = Result estimated below the PQL
- < = not detected above PQL
- ppb = parts per billion

**Outlet Types:**
- WF=Water Fountain/Bubbler
- HS=Hydration Station/Bottle Filling Station
- FT=Faucet/Tap
- FP - Food Prep/Pot-Filler/Kitchen Kettle
- IM - Ice-Maker
Indicates a follow-up flush sample result. Standard protocol when retesting AA outlets is to collect a follow-up flush sample.

*Denotes an outlet location that has not been in use (the outlet was temporarily turned on for testing).

The School District will test the drinking water at your school every five years and share the results through a letter and also post the results on the District’s website. If you wish to review the results from your school and for more information, you may visit the District’s website at: www.philasd.org/waterresults.

Sincerely,

Francine Locke, MS
Environmental Director
