I. INTRODUCTION

Batta Environmental Associates, Inc. (BATT), was requested by the School District of Philadelphia's (SDP) Office of Environmental Management Services (OEMS) to perform oversight and clearance testing during a paint and plaster stabilization project being performed at the Catharine Elementary School located at 6600 Chester Avenue in Philadelphia, PA (the "School"). The purpose of the oversight was to document that all requirements of the US Environmental Protection Agency (EPA) Lead Renovation, Repair and Painting (RRP) rules were being followed and documented.

II. METHODS EXECUTIVE SUMMARY

A. Preliminary Steps

i. Parent and Staff Notifications

Parents and staff were notified of the paint and plaster project by mail several weeks prior to the commencement of the project. Additionally, prior to the start of the project, parent and staff meetings were held by the SDP OEMS, SDP Maintenance, and SDP Operations to explain the process of the paint and plaster project and to field any questions or concerns.

ii. Decluttering

Classrooms, closets and other storage areas were decluttered prior to the commencement of the stabilization work. Coordination of the decluttering activities were made between teachers and facilities staff to ensure that obsolete and unnecessary academic materials were discarded and that resources were provided to assist in the decluttering tasks; such as, providing support staff for heavy lifting and/or moving large furniture and that additional recycling/waste dumpsters were available at the school.

iii. Wall Hangings

Posters, bulletin boards, framed art and other wall hangings were removed prior to the commencement of the paint stabilization work. This was coordinated with teachers by the SDP Operations Division at a kick-off meeting and during the phasing of the project, with the help of the Principal.

iv. Swing Space

Swing space (if needed) was identified prior to the commencement of the stabilization work to ensure that classrooms were available during the school year. A plan was created on a school-by-school basis to relocate students and teachers from classrooms during the course

of this work. All work areas were scheduled for cleaning by facilities staff after the paint stabilization work was completed by SDP Maintenance Staff.

v. Facilities Building Cleaning Staff Training

SDP Facilities Building Cleaning Staff were provided with information about this project and expectations for post-cleaning, including the use of wet-wipes and High Efficiency Particulate Air (HEPA) vacuums.

B. Pre-Cleaning

On an as-needed basis, for areas such as cluttered storage closets, that required extensive movement of materials, HEPA vacuuming, and wet-wiping prior to the paint and plaster stabilization work, the SDP Maintenance Environmental staff performed pre-cleaning of the area in advance of the stabilization work. The intent of this task was to provide a clean work area prior to decluttering and stabilization.

Additionally, post-cleaning was conducted by SDP facilities staff after the paint and plaster stabilization was completed and the RRP requirements were met. This included the HEPA vacuuming and wet-wiping of all horizontal surfaces and polishing floors.

C. Paint & Plaster Stabilization Procedures

The paint and plaster stabilization work complied with the EPA's Lead RRP rule. All staff conducting this work were trained and/or certified as Lead RRP workers.

The following procedures were followed:

i. Work Practices

- Isolate work areas to restrict dust from impacting adjacent areas.
- Post signs/notifications as per EPA Lead RRP.
- Place “walk-off” pads at all access points into/out of work areas.
- Seal all openings (windows, doors, and HVAC system registers/grilles) inside work areas as per direction from on-site environmental consultants and consistent with the EPA Lead RRP rules & guidelines.
- Workers were to wear disposable clothing and foot coverings while inside work areas and were not permitted to leave the work areas wearing disposable clothing.
- Move/cover all remaining objects in the work area to protect them (including all open bins, shelves and boxes in the area).

- Employ/Erect “portable” dust containment barrier systems to limit the size of work areas requiring post-cleaning and limit testing and exposure.
- Place plastic floor coverings extending at least six feet out from vertical surfaces being stabilized, unless utilizing vertical barriers/containment systems.
- Perform all paint stabilization work in compliance with the EPA Lead RRP rules and guidelines and as per the directions of on-site environmental consultants to minimize dust contamination.
- Take all steps necessary to ensure that no dust or debris leaves the work area while the work is being performed.
- Use precautions to ensure that all employees, tools, and other items, including the exteriors of waste containers, are free of dust and debris before leaving the work area.
- Collect all paint chips & debris, fold up plastic floor coverings and any other plastic sheeting used on horizontal surfaces without dispersing dust or debris and dispose of the material in heavy duty plastic waste bags.
- Do not use power tools.
- Do not use dry sweeping with brooms.
- Do use water/misting during stabilization to minimize dust.
- Do use HEPA vacuums and wet wiping/cleaning techniques.

ii. Oversight

An environmental consultant was on-site to oversee the paint and plaster stabilization work and to ensure compliance with lead safe work practices. An oversight report was completed at the end of every shift to record the work areas that were stabilized. The following tasks were verified and recorded:

- Pre-cleaning.
- Contents moved.
- Work area prepped.
- Surfaces stabilized.
- Contents back in place.
- Final inspection approval and photos.

D. Clean-Up & Completion

The following clean-up and completion procedures were performed for each work area following the completion of the stabilization work:

i. Clean-up

- There should be no signs of loose, peeling, flaking, bubbling or crumbling paint or plaster visible on walls or ceilings or on any other painted surfaces.

- There should be no visible signs of paint chips, debris or dust of any kind on surfaces within “contained” and isolated work areas NOR outside of the contained and isolated work areas.
- Window sills, floors, baseboards, shelving units, tops of cabinets, desks, chairs, tables and all other horizontal surfaces must be free of any visible signs of paint and plaster dust and/or debris.
- There must be absolutely no visible signs of paint chips, and/or paint/plaster dust or debris on academic/educational materials, including books, bins, toys, desks, chairs, carpets, papers, etc., after each work shift and to allow for re-occupancy the next day.
- Any remaining paint and plaster must be tightly adhered to wall and ceiling surfaces such that it cannot be further damaged, pried off or disturbed by “simple fingernail pressure” otherwise work will not be considered to be successfully completed.
- Newly painted surfaces should match the aesthetics of the area in total and should cover the entirety of the wall or ceiling area that was addressed through this work. No visible “patches” of paint should be observed.

ii. Testing

The SDP and the Philadelphia Federation of Teacher’s (PFT’s) Environmental Consultant worked closely to develop an agreed upon approach to verify that stabilization work was performed in accordance with lead safe work practices, and that classrooms would be safe for re-occupancy by children and staff. This approach exceeded the EPA Lead RRP rule requirements in terms of the types of, and amounts of, testing performed and the testing was conducted in the work areas. The areas were cleaned by general cleaners after the stabilization work was completed and the clearance testing was performed.

Qualitative testing methods (i.e., EPA RRP verification wipe testing and colorimetric wipe testing) were compared with the quantitative testing method of Flame Atomic Absorption Spectrophotometry (FAAS) as indicated in the testing protocol below.

a. Testing Protocol

Step 1 -- EPA RRP Verification Wipes and Colorimetric Wipes

The environmental consultant and painter foreman coordinated the EPA RRP Verification Test Wipe in rooms/areas that were stabilized and cleaned, and where plastic work area coverings were removed and visual inspection conducted. After EPA RRP verification wipes passed the cleanliness standard for any surface and/or a 40 square foot (SF) section, the colorimetric testing was conducted by the environmental consultant.

The colorimetric wipe tests occurred in “child-occupied areas” on approximately 10% of surfaces considered “clean” following the use of the verification wipes. These surfaces

generally included floors, window sills, or the tops of any other immovable objects that were covered and cleaned in each work area (e.g. CUVs, immovable bookshelves, large desks, etc...). In some instances, additional colorimetric wipes were collected on surfaces that had been moved and covered and placed outside of the work area. These surfaces generally included desks, chairs, bookshelves, cabinets, etc.

“Child-occupied areas” included: classrooms, restrooms, cafeterias, libraries, gymnasiums, and auditoriums that are routinely used by children in Pre-Kindergarten through First Grade. Common areas that children in Pre-Kindergarten through First Grade only pass through, such as hallways, stairways, and garages were not included. “Child-occupied areas” were identified by the Principal of the school.

Step 2 -- Response to Failed Tests

If the colorimetric testing “failed”, then the 40 SF area was re-wiped by EPA RRP Wipes. The process continued until both testing methods confirmed a “pass”.

Step 3 -- Flame Atomic Absorption Spectrophotometry (FAAS)

Flame Atomic Absorption Spectrophotometry (FAAS) was used to verify and confirm the results of the colorimetric testing. FAAS was used as a quality assurance/quality control measure for the colorimetric samples. Approximately 10% (or at least one) of the colorimetric samples were submitted for FAAS analysis.

Step 4 -- Release Spaces Back to School/Operations

When EPA RRP wipes, colorimetric wipes, and FAAS analyses were all acceptable, and if work was completed in accordance with this procedure, the room was turned over to the District's Operations team for “deep cleaning” and for re-occupancy.

Step 5 - Ongoing Review

All sampling and testing data, information, and results are readily available and accessible for review by school staff, parents and members of the Oversight Advisory Committee and can be reviewed on a regular basis. Any suggested modifications, changes or other revisions will be considered by the School District of Philadelphia.

The three testing methods conducted were as follows:

Summary of Paint & Plaster Stabilization Activities
Catharine Elementary School - Philadelphia, PA

Type of Clearance Tests	Building Component	Number of Sample Locations within Work Area	Type of Testing	Testing Specifications/Limitations
EPA RRP Cleaning Verification Wipe	Floors, Countertops, Desks, Tables, Window Sills.	One (1) wipe every 40 square feet (ft ²) or entire surface of component if surface area is less than 40 ft ² . One (1) wipe for every window sill.	Qualitative	<ul style="list-style-type: none"> Qualitative testing based on cleanliness (white glove test). According to RRP, the areas pass after the third cleaning, regardless of verification.
Colorimetric Wipe: SKC, Inc. Full Disclosure® Instant Wipes	Floors, Countertops, Desks, Tables, Window Sills, Etc.	10% of surfaces considered “clean” following the use of EPA RRP Cleaning Verification Wipes.	Qualitative	<ul style="list-style-type: none"> Qualitative testing based on colorimetric visual comparison. Lower Limit of Visual Detection is 18 micrograms per ft² (µg/ft²) of lead. False positive and false negative interferences from silver, cadmium, barium, mercury, and titanium (percentages unknown). Involves field preparation of sampling media using reagents.

Type of Clearance Tests	Building Component	Number of Sample Locations within Work Area	Type of Testing	Testing Specifications/Limitations
Flame Atomic Absorption Spectrophotometry (FAAS)	Analyze Colorimetric Wipes from locations listed above.	A minimum of one and a maximum of 10% of colorimetric wipes were subjected to laboratory analysis by FAAS for verification. This testing method was used to validate the accuracy of qualitative methods mentioned above.	Qualitative	<ul style="list-style-type: none"> Interior Floors and Desks: < 20 µg/ft². This is based upon a SDP and PFT agreement. This is half the current HUD and EPA standard. This is tied to the detection level for the colorimetric wipe, which is approximately 18 µg/ft² per wipe. Window Sills: < 100 µg/ft² per HUD.

III. OVERSIGHT

A. Scope of Work

A scope of work was developed for the Catharine Elementary School following a previous room-by-room inspection of the school. During the inspection, the location and quantity of damaged paint and plaster, along with any associated debris and whether the damage was the result of an on-going moisture intrusion problem, were noted. This information was entered into a scope of work spreadsheet, which was provided to the SDP's painting contractors in order to create a schedule for the work to be completed.

During the paint and plaster stabilization work, additional areas of damage were found behind wall hangings, inside of closets that had now been decluttered, and behind furniture once it had been moved. These additional areas of work were added to the scope of work as they were observed.

The Scope of Work Table for the Catharine Elementary School is included in Appendix A of this report.

B. EPA Checklist

Throughout the paint and plaster stabilization work, BATTA's on-site inspector observed, documented, and signed-off on tasks required by the EPA RRP. Additional notes were added to the EPA Checklist to document different oversight tasks that took place. These included documenting that warning signs were posted at the entrance to the work area, that the work area had been contained to prevent the spread of dust and debris, that all objects in the work area had been removed or covered, that all HVAC ducts in the work area were closed and covered, that windows in the work area were closed, that doors in the work area were closed and sealed, that doors that must be used in the work area were covered to allow passage but prevent the spread of dust, that floors in the work area were covered with taped-down plastic, that waste was being contained while on-site and while being transported, that the work site was properly cleaned after the renovations, that all paint chips and debris were picked up and that the protective sheeting was misted, folded dirty-side inward, and taped for removal. Also, that the work area surfaces and objects were cleaned using HEPA vacuums and/or wet-wiping, that a certified renovator performed the post-renovation cleaning verification, a description of the post-renovation cleaning verification was documented, including the number of wet and dry cloths used, and if the dust clearance testing was performed.

The EPA Checklist Table for the Catharine Elementary School is included in Appendix B of this report.

C. Oversight

Throughout the paint and plaster stabilization project, BATTAs's on-site inspector documented the day-to-day tasks performed for each work area. These tasks included the dates of pre-cleaning, the moving of the contents of the room, the prepping of the work area, the stabilization of the painted surfaces, and the final inspection.

The Oversight Table for the Catharine Elementary School is included in Appendix C of this report.

D. Sample Results

Throughout the paint and plaster stabilization project, BATTAs's on-site inspector documented all sampling results for each work area location. This included all RRP verification wipes, colorimetric wipes, and wipes that were submitted to a certified laboratory for FAAS analysis.

The Sample Results Table for the Catharine Elementary School is included in Appendix D of this report.

Refer to Appendix E for Photographs of the project. Refer to Appendix F for Environmental Consultant Certifications, Appendix G for Paint Contractor Certifications or Documentation of Training (certifications of the individuals performing the RRP work/training were provided to the SDP prior to the work), and Appendix H for Documentation of Parent and Staff Notification.

BATTAs's work relative to this specific assignment has been completed. We appreciate the opportunity to have been of service to the School District. Please feel free to contact BATTAs if you have any questions.

Paint and Plaster Stabilization: Project Start

Dear School Families,

The School District of Philadelphia works daily to ensure that our students and staff have a safe, healthy environment in which to learn and work. On behalf of the School District, I am writing to share information with you about plans for renovation to remove loose and peeling paint in our school building. The goal of the work is to enhance classroom environments and remove the risk of lead exposure to children in our school community.

The School District has begun paint and plaster stabilization work in school buildings constructed prior to 1978 that are likely to contain ~~lead-based paint~~. ~~Paint~~ stabilization involves removing loose, peeling, flaking and crumbling paint and plaster under controlled conditions. Our school has been selected for this work because paint damage was documented in ~~occupied spaces~~ such as classrooms and classroom closets, administrative offices, cafeteria, auditorium, bathrooms, kitchen, hallways, and emergency exit stairways.

The work is being completed by individuals who are trained and certified in United States Environmental Protection Agency (EPA) ~~lead-based paint renovation~~, repair and painting work practices. These work practices ensure that classrooms and other areas are free of paint chips, dust and debris. Each space will be assessed after the work is completed in each area to ensure that the spaces are ready for students and staff to safely occupy. Building staff will also look for signs of paint and plaster damage and clean paint and plaster dust and debris using a HEPA vacuum before, during, and after the project.

Details about the project including the environmental consultant's assessment report, project schedule and frequently asked questions are available in the school's main office or by visiting www.philasd.org/facilities. Copies will also be provided to the School Advisory Council and Home and School Association in the near future.

We understand that you likely will have additional questions, and we will work to address those promptly. The School District will host a meeting for families to share an overview of the repairs and to answer questions on **Thursday, March 7, 2019 at 8:30 AM** in our school.

Sincerely,
Lisa Wilmer
Principal
