## **I. INTRODUCTION**

Criterion Laboratories, Inc. (Criterion), was requested by the School District of Philadelphia's Office of Environmental Management Services (OEMS) to perform oversight and clearance testing during a paint and plaster stabilization project being performed by the School District Painters at Jackson Elementary School located at 1213 S. 12<sup>th</sup> Street in Philadelphia, PA (the "School"). The purpose of the oversight was to document that all parts of the US Environmental Protection Agency (EPA) Lead Renovation, Repair and Painting rules were being followed and documented.

## **II. METHODS EXECUTIVE SUMMARY**

### **A. Preliminary Steps**

#### **i. Parent and Staff Notifications**

Parents and staff were notified of the paint and plaster project by mail several weeks prior to the commencement of the project. Additionally, prior to the start of the project, parent and staff meetings with were held by OEMS, Maintenance, and Operations to explain the process of the paint and plaster projects and to field any questions or concerns.

#### **ii. Decluttering**

Classrooms, closets and other storage areas were decluttered prior to the commencement of stabilization work. Coordination of the decluttering activities was made between teachers and facilities staff to ensure that outdated and unneeded academic materials were discarded, and that resources were provided to assist in the decluttering tasks such as support staff for heavy lifting and/or moving large furniture and additional recycling dumpsters.

#### **iii. Wall Hangings**

Posters, bulletin boards, framed art and other wall hangings were removed prior to the commencement of the paint stabilization project. This was coordinated with teachers by the Operations Division at the kick-off meeting, and during the phasing of the project, with the help of the Principal.

#### **iv. Swing Space**

Swing space was identified prior to the commencement of stabilization work to ensure that classrooms were available during the school year. A plan was created on a school-by-school basis to relocate students and teachers from classrooms during the course of this work. All work areas were scheduled for cleaning by facilities staff after the paint stabilization work was completed by Maintenance Painting Staff.

v. Facilities Building Cleaning Staff Training

Facilities Building Cleaning Staff were provided with information about this project and expectations for post-cleaning, including use of wet-wipes and HEPA vacuums.

**B. Pre-Cleaning**

On an as-needed basis, for areas such as cluttered storage closets, that required extensive movement of materials, HEPA vacuuming, and wet-wiping prior to paint and plaster stabilization, the Maintenance Environmental staff performed a pre-

cleaning in advance of stabilization work. The intent of this task was to provide a clean work area prior to decluttering and stabilization.

Additionally, post-cleaning was conducted by facilities staff after paint and plaster stabilization was completed. This included the HEPA vacuuming and wet-wiping of all horizontal surfaces and polishing floors.

**C. Paint & Plaster Stabilization Procedures**

Paint and plaster stabilization work complied with the EPA's Lead RRP rule. All staff conducting this work were trained and/or certified as Lead RRP workers.

The following procedures were followed:

**i. Work Practices**

- Isolate work areas to restrict dust from impacting adjacent areas.
- Post signs/notifications as per EPA Lead RRP.
- Place "walk-off" pads at all access points into/out of work area.
- Seal all openings [windows, doors, and HVAC system registers/grilles] inside work areas as per direction from on-site environmental monitors and consistent with the EPA Lead RRP rules & guidelines.
- Workers are to wear disposable clothing and foot coverings while inside work areas and will not leave work areas wearing disposable clothing.
- Move/cover all remaining objects in work area to protect them. Including all open bins, shelves and boxes in the classroom.
- Employ/Erect "portable" dust containment barrier systems to limit the size of work areas requiring post-cleaning and limit testing and exposure.
- Place plastic floor coverings to extend at least 6 feet out from vertical surfaces being stabilized unless utilizing vertical barriers/containment systems.
- Perform all paint stabilization work in compliance with the EPA Lead RRP rules & guidelines and as per the directions of on-site environmental monitors to minimize dust contamination.
- Take all steps necessary to ensure that no dust or debris leaves the work area while the work is being performed.
- Use precautions to ensure that all employees, tools, and other items, including the exteriors of waste containers, are free of dust and debris before leaving the work area.

- Collect all paint chips & debris, fold up plastic floor coverings and any other plastic sheeting used on horizontal surfaces, without dispersing dust or debris and dispose of the material in heavy duty plastic waste bags.
- Do not use power tools.
- Do not use dry sweeping with brooms.
- Do use water/misting during stabilization to minimize dust.
- Do use HEPA vacuums and wet wiping/cleaning techniques.

## **ii. Oversight**

The environmental technician will oversee paint and plaster stabilization work to ensure compliance with lead safe work practices. An oversight report will be

completed at the end of every shift to record the work areas that were stabilized. The following tasks will be verified and recorded:

- Pre-cleaning
- Contents moved
- Work area prepped
- Surfaces stabilized
- Contents back in place
- Final inspection approval and photos

## **D. Cleanup & Completion**

The following clean-up and completion procedures were performed for each work area following the completion of stabilization work:

### **i. Cleanup**

- There should be no signs of loose, peeling, flaking, bubbling or crumbling paint or plaster visible on walls or ceilings or on any other painted surfaces.
- There should be no visible signs of paint chips, debris or dust of any kind on surfaces within “contained” and isolated work areas NOR outside of the contained and isolated work areas.
- Window sills, floors, baseboards, shelving units, tops of cabinets, desks, chairs, tables and all other horizontal surfaces must be free of any visible signs of paint and plaster dust and/or debris.
- There must be absolutely no visible signs of paint chips, and/or paint/plaster dust or debris on academic/educational materials, including books, bins, toys, desks, chairs, carpets, papers, etc., after each work shift and to allow for re-occupancy the next day,
- Any remaining paint and plaster must be tightly adhered to wall and ceiling surfaces such that it cannot be further damaged, pried off or disturbed by “simple fingernail pressure” otherwise work will not be considered to be successfully completed.
- Newly painted surfaces should match the aesthetics of the area in total and should cover the entirety of the wall or ceiling area that was addressed through this work. No visible “patches” of paint should be observed.

## **ii. Testing**

The District and the PFT's Environmental Consultant worked closely to develop an agreed upon approach to verify that stabilization work was performed in accordance with lead safe work practices, and that classrooms would be safe for re-occupancy by children and staff. This approach exceeds the EPA Lead RRP rule requirements in terms of the types of, and amounts of, testing performed. Testing will take place in work areas. The areas will be cleaned by general cleaners after the stabilization work is completed and the clearance testing is performed.

Qualitative testing methods, i.e., EPA RRP verification wipe testing and colorimetric wipe testing, will be compared with the quantitative testing method of Atomic Absorption Spectrophotometry (AAS) as indicated in the testing protocol below. If

the comparison testing is consistently correlated, only qualitative testing will continue for the duration of the project.

### **a. Testing Protocol**

#### **Step 1 -- EPA RRP Verification Wipes and Colorimetric Wipes**

The environmental consultant and painter foreman will coordinate the EPA RRP Verification Test Wipe in rooms/areas that have been stabilized and cleaned, and where plastic work area coverings have been removed and visual inspection conducted. After EPA RRP verification wipes pass the cleanliness standard for any surface and/or a 40 square feet (SF) section, the colorimetric testing will be conducted by the environmental consultant.

The colorimetric wipe tests will occur in "child-occupied areas" on approximately 10% of surfaces considered "clean" following the use of the verification wipes. These surfaces may include floors, window sills, or the tops of any other immovable objects that were covered and cleaned in each work area (e.g. CUVs, immovable bookshelves). Additional colorimetric wipes may be collected on surfaces that had been moved and covered and placed outside of the work area. These surfaces may include desks, chairs, bookshelves, etc.

"Child-occupied areas" will include: classrooms, restrooms, cafeterias, gymnasiums, and auditoriums that are routinely used by children in PK-1st grade classrooms. Common areas that children in PK-1st grade classrooms only pass through, such as hallways, stairways, and garages are not included. "Child-occupied areas" will be identified by the Principal of the each school.

#### **Step 2 -- Response to Failed Tests**

If colorimetric testing "fails," then the 40 SF area will be re-wiped by EPA RRP Wipes. The process will continue until both testing methods confirm a "pass."

### Step 3 -- Flame Atomic Absorption Spectrophotometry (FAAS)

Flame Atomic Absorption Spectrophotometry (FAAS) will be used to verify and confirm the results of the colorimetric testing. FAAS will be used as a quality assurance/quality control for the colorimetric samples. Approximately 10% of the colorimetric samples should be submitted for FAAS analysis.

### Step 4 -- Release Spaces Back to School/Operations

If EPA RRP wipes and colorimetric wipes are both acceptable, as determined on site, and if work was completed in accordance with this procedure, the room will be turned over to the District's Operations team for "deep cleaning" and for re-occupancy.

### Step 5 — Ongoing Review

All sampling and testing data, information and results will be readily available and accessible for review by school staff, parents and members of the Oversight Advisory Committee and will be reviewed on a regular basis. Any suggested modifications, changes or other revisions will be considered by the School District of Philadelphia.

The three testing methods were conducted as follows:

Type of Clearance Tests	Building Component	Number of Sample Locations within Work Area	Type of Testing	Testing Specifications/Limitations
EPA RRP Cleaning Verification Wipe	Floors, Countertops, Desks, Tables, Window Sills	One (1) wipe every 40 square feet (ft <sup>2</sup> ) or entire surface of component if surface area is less than 40ft <sup>2</sup> One (1) wipe for every window sill	Qualitative	<ul style="list-style-type: none"><li>• Qualitative testing based on cleanliness (white glove test)</li><li>• According to RRP, the areas pass after the 3rd cleaning, regardless of verification</li></ul>
Colorimetric Wipe SKC, Inc. Full Disclosure® Instant Wipes	Floors, Countertops, Desks, Tables, Window Sills, Etc.	10% of surfaces considered "clean" following the use of EPA RRP Cleaning Verification Wipes	Qualitative	<ul style="list-style-type: none"><li>• Qualitative testing based on colorimetric visual comparison</li><li>• Lower Limit of Visual Detection is 18µg of lead</li><li>• False positive and false negative interferences from silver, cadmium, barium, mercury, and titanium (percentages unknown)</li><li>• Involves field preparation of sampling media using reagents</li></ul>

Flame Atomic Absorption Spectrophotometry (AAS)	Analyze Colorimetric Wipes from locations listed above	A minimum of one and a maximum of 10% of colorimetric wipes will also be subjected to laboratory analysis by FAAS for verification. This testing method will be used on a periodic basis to validate the the accuracy of qualitative methods above.	Quantitative	<ul style="list-style-type: none"> <li>● Interior Floors and Desks: &lt; 20 µg/ft<sup>2</sup> This is based upon a District and PFT agreement. This is half the current HUD and EPA standard. This is tied to the detection level for the colorimetric wipe which is 18µg per wipe.</li> <li>● Window Sills: &lt; 100 µg/ft<sup>2</sup> per HUD</li> </ul>

### **III. OVERSIGHT**

#### **A. Scope of Work**

A scope of work was developed for Jackson Elementary School following a room-by-room inspection of the school. During the inspection, the location and quantity of damaged paint and plaster, along with any associated debris and whether the damage was the result of an on-going moisture intrusion, were noted. This information was entered into a scope of work spreadsheet, which was provided to the School District Painting Department in order to create a schedule for the work to be completed.

During the paint and plaster stabilization project, additional areas of damage were found behind wall hangings, inside of closets that had now been decluttered, and behind furniture once it had been moved. These additional areas of work were added to the scope of work as they were observed.

The scope of work for Jackson Elementary School is included in the Appendix A of this report.

#### **B. EPA Checklist**

Throughout the paint and plaster stabilization project, Criterion's on-site inspector observed, documented, and signed-off on tasks required by the EPA RRP. Additional notes were added to the EPA Checklist to document different oversight tasks that took place. These included documenting that warning signs were posted at the entrance to the work area, that the work area had been contained to prevent the spread of dust and debris, that all objects in the work area had been removed or covered, that all HVAC ducts in the work area were closed and covered, that windows in the work area were closed, that doors in the work area were closed and sealed, that doors that must be used in the work area were covered to allow passage but prevent the spread of dust, that floors in the work area were covered with taped-down plastic, that waste was being contained while on-site and while being transported, that the work site was properly cleaned after the renovations, that all paint chips and debris were picked up and that the protective sheeting was misted, folded dirty-side inward, and taped for removal, that the work area surfaces and objects were cleaned using HEPA vacuums and/or wet-wiping or mopping, that a certified renovator performed the post-renovation cleaning verification, a description of the post-renovation cleaning verification, including the number of wet and dry cloths used, and if the dust clearance testing was performed.

The EPA Checklist for Jackson Elementary School is included in the Appendix B of this report.

### **C. Oversight**

Throughout the paint and plaster stabilization project, Criterion's on-site inspector documented the day-to-day tasks performed for each work area. These tasks included the dates of pre-cleaning, the moving of the contents of the room, the prepping of the work area, the stabilization of the painted surfaces, and the final inspection.

The Oversight Table for Jackson Elementary School is included in the Appendix C of this report.

### **D. Sample Results**

Throughout the paint and plaster stabilization project, Criterion's on-site inspector documented all sampling results for each work area location. This included all RRP verification wipes, colorimetric wipes, and wipes to be submitted for Flame AAS analysis.

The Sample Results Table for Jackson Elementary School is included in the Appendix D of this report.

***Appendix D. Sample Results Table***

	F l o o r	Space # (on Floor Plan)	On Site Room Name	Component	Description of Paint and Plaster Damage (i.e. cracking, chipping, gouges, holes, flaking, spalling, efflorescence, significant moisture damage)	Number of Required RRP Wipes	Number of Colorimetric Wipes Used to Pass	Final Colorimetric Wipe Submitted for AAS Analysis (yes/no)	AAS Analysis Results	Other Notes or Comments
1	3	301	Classroom 301	W3	Cracked paint at wall.	14	3	Yes	Floor - <20 ug/ft2; Outside of Work Area on Desktop - <20 ug/ft2	Two colorimetric inside the work area and one outside work area
2	3	302	Classroom 302	W2	Flaking paint below bulletin board.	14	5	Yes	Floor - <20 ug/ft2; Outside of Work Area on Desktop - <20 ug/ft2	4 colorimetric inside the work area and one outside the work area
3	3	302	Classroom 302	W4	Flaking paint on window sills, on window aprons, and behind radiators	Part of Above	Part of Above	Part of Above		
4	3	303	Classroom 303	W1	Flaking paint at wall by entrance and below bulletin board.	12	3	Yes	<20 ug/ft2	Coormetric wipes passed
5	3	303	Classroom 303	W3	Flaking paint and damaged plaster at Window 1	Same as above	Same as above	Same as above		Same as above
6	3	304	Classroom 304	W1	Flaking paint at wall by entrance	12	3	Yes	Floor - <20 ug/ft2, OWA Desktop - <20ug/ft2	Two colorimetric inside the work area and one outside work area
7	3	306	Classroom 306	W1	Flaking paint at wall by entrance.	6	3	Yes	5/25/18 - Floor - 32 ug/ft2, Outside of Work Area on Desktop - 22 ug/ft2;; 05/29/18 - Floor - <20 ug/ft2 (retest), OWA on Desktop - <20ug/ft2 (retest)	Two colorimetric inside the work area and one outside work area
8	3	307	Classroom 307	Ceiling	Flaking paint at ceiling above window 3	3	1	No (Per new SDP Fire Stair protocol)		1 COlormetric Failed. Will be recleaned for retest 6/11/2018
9	3	307	Classroom 307	W3	Flaking paint at column by window 5	1	1	Yes	<20 ug/ft2	1 Colormetric taken at specific work area
10	3	308	Classroom 308	W2	Flaking paint at wall by teachers desk	9	4	Yes	Floor - <20 ug/ft2; OWA on Desktop - <20 ug/ft2.	Three colorimetric inside the work area and one outside the work area
11	3	308	Classroom 308	W3	Flaking paint at window 3 window sill and below window					
12	3	309	IMC Office	W1	Damaged plaster by entrance door	1	2	Yes	Floor - <20 ug/ft2; OWA on Tabletop - <20 ug/ft2	One colorimetric inside the work area and another outside the work area
13	3	309	IMC Office	W3	Paint/Plaster debris on window sill.	1	1	Yes	<20 ug/ft2	

	F l o o r	Space # (on Floor Plan)	On Site Room Name	Component	Description of Paint and Plaster Damage (i.e. cracking, chipping, gouges, holes, flaking, spalling, efflorescence, significant moisture damage)	Number of Required RRP Wipes	Number of Colorimetric Wipes Used to Pass	Final Colorimetric Wipe Submitted for AAS Analysis (yes/no)	AAS Analysis Results	Other Notes or Comments
14	3	310	IMC/Library	W3	Paint/Plaster debris on window sills. Flaking paint behind radiators.	3	4	Yes	Floors <20 ug/ft2; <20 ug/ft2, <20 ug/ft2, OWA on Bookcase <20 ug/ft2	One Colorimetric Wipe was taken outside work area in the center of the room on cleaned bookcase
15	3	301A	Storage Closet next to Classroom 301	Ceiling	Flaking paint at ceiling	4	1	Yes	5/8/18 - 83 ug/ft2; 5/10/18 - 76 ug/ft2 (retest #1); 5/15/18 - 78 ug/ft2 (retest #2)	Recleaned and retested on 5/10/18 by Painters. Recleaned by A-Team on 5/15/18. 1 colorimetric wipe
16	3	302B	Girl's Restroom next to Classroom 302	Ceiling	Flaking paint at ceiling/wall above window.	4	1	Yes, 1 wipe	<20 ug/ft2	
17	3	304B	Room 304-A Counselor's Office	Ceiling	Flaking paint above windows.	See comments	See comments	See comments	See comments	Previously stabilized and painted.
18	3	304B	Room 304-A Counselor's Office	W3	Flaking paint to left and right of windows	3	2	Yes	Floor - <20ug/ft2; OWA on Tabletop - <20 ug/ft2	One colorimetric inside the work area and another outside the work area
19	3	304C	Room 304-A Storage Closet	W4	Paint debris on floor below shelf.	Part of above	Part of above	Part of above		
20	3	305A	Classroom 305 Coat Closet Area	W3	Flaking paint behind radiator below window.	3	3	Yes	21 ug/ft2	
21	3	306A	Classroom 306 Coat Closet Area	W2	Cracked paint at wall.	See comments	See comments	See comments	See comments	6/26
22	3	306A	Classroom 306 Coat Closet Area	W3	Cracked paint at wall.	See comments	See comments	See comments	See comments	No Damage observed - Limited access
23	3	308A	Classroom 308 Coat Closet Area	W2	Flaking paint at pipe and wall.	4	1	Yes	5/15/18 - 73 ug/ft2; 5/16/18 - 51 ug/ft2 (retest #1); 5/17/18 - <20 ug/ft2 (retest #2)	
24	3	308A	Classroom 308 Coat Closet Area	W3	Flaking paint below window	Part of Above	Part of Above	Part of Above		
25	3	309A	Storage between IMC/Library and IMC Office	Ceiling	No Access	3	1	Yes	21.5 ug/ft2	
26	3	309A	Storage between IMC/Library and IMC Office	Floor	No Access	Part of Above	Part of Above	Part of Above	Part of Above	
27	3	309A	Storage between IMC/Library and IMC Office	W1	No Access	Part of Above	Part of Above	Part of Above	Part of Above	
28	3	309A	Storage between IMC/Library and IMC Office	W2	No Access	Part of Above	Part of Above	Part of Above	Part of Above	
29	3	309A	Storage between IMC/Library and IMC Office	W3	No Access	Part of Above	Part of Above	Part of Above	Part of Above	
30	3	309A	Storage between IMC/Library and IMC Office	W4	No Access	Part of Above	Part of Above	Part of Above	Part of Above	
31	3	310A	IMC/Library Middle Storage Closet	W1	Flaking paint at wall.	4	1	Yes, 1 wipe	<20 ug/ft2	

	F l o o r	Space # (on Floor Plan)	On Site Room Name	Component	Description of Paint and Plaster Damage (i.e. cracking, chipping, gouges, holes, flaking, spalling, efflorsence, significant mositure damage)	Number of Required RRP Wipes	Number of Colorimetric Wipes Used to Pass	Final Colorimetric Wipe Submitted for AAS Analysis (yes/no)	AAS Analysis Results	Other Notes or Comments
32	3	310A	IMC/Library Middle Storage Closet	W2	Flaking paint at wall.	Part of above	Part of above	Part of above	Part of above	
33	3	310A	IMC/Library Middle Storage Closet	W3	Flaking paint at wall.	Part of above	Part of above	Part of above	Part of above	
34	3	310A	IMC/Library Middle Storage Closet	W4	Flaking paint at wall.	Part of above	Part of above	Part of above	Part of above	
35	3	310B	Storage Room in IMC/Library	Ceiling	No Access	3	1	Yes, 1 wipe	<20 ug/ft2	Considered 1 work area. 1 Colormetric wipe obtained. Outside Wipe sample taken prior in IMC on 5/16/2018

***Appendix H. Documentation of Parent and Staff Notification***

THE SCHOOL DISTRICT OF  
PHILADELPHIA

Andrew Jackson School  
1213 S. 12TH ST.  
PHILADELPHIA, PA 19147

Kelly Espinosa  
Principal

Phone: 215 - 400 - 7970  
Fax: 215 - 400 - 7971

**Notice of Paint and Plaster Stabilization Work**

Dear Jackson School Families,

The purpose of this letter is to share information about work that is underway at our school.

The School District of Philadelphia is currently conducting paint and plaster stabilization work in school buildings constructed prior to 1978 that are likely to contain lead-based paint. Paint stabilization involves removing loose, peeling, flaking and crumbling paint and plaster under controlled conditions. The goal of the work is to enhance classroom environments and remove the risk of lead exposure to children in our school community. Our school has been selected for this work because paint damage was documented in occupied spaces such as classrooms and classroom closets, administrative offices, cafeteria, auditorium, bathrooms, kitchen, hallways, and emergency exit stairways.

The work is being completed by environmental contractors and School District painters during the evening hours following school dismissal. These individuals are trained and certified in United States Environmental Protection Agency (EPA) lead-based paint renovation, repair and painting work practices. These work practices ensure that classrooms and other areas are free of paint chips, dust and debris after the project is completed.

Upon completion, loose, flaking, peeling and crumbling paint and plaster will be removed from ceilings and walls. The areas will also be patched, repainted and cleaned. A quality control assessment will also take place after the work is completed in each area to ensure that the spaces are ready for students and staff to safely occupy.

A full report on the project will be completed and made available in the school's main office in the near future. For more information about lead, please contact the Lead Prevention Unit of the Philadelphia Department of Health at (215) 685-2788 or visit <http://www.phila.gov/health/childhoodlead>.

Thank you for your attention on this matter.

Sincerely,

Kelly Espinosa, Principal
