# The positive process of the world during a crisis

The world is facing a severe problem right now and is hurting the population. That is truly a tragedy because a lot of people are losing their loved ones. On the other hand the ecosystem and the pollution are getting better. There are some benefits due to the coronavirus like the lack of pollution, healthier coral reefs and waste from garbage reducing.

The pollution has gotten better since the virus and there is now more fresh oxygen around the world. This is important because it helps our ecosystem and shows us a lesson that if we help the earth the world will become a better place for people.

REPORTED WASTE & RECYCLING FACILITY FIRES IN US/CAN FEB 2016 – MAR 2020

The reefs in the water are becoming more healthier since the quarantine. The boats around the water caused algae to grow. After quarantine, the coral reefs have less algae. Also there is less garbage around the world the statistics state that the waste has reduced by sixty percent due to quarantine. That is having a great benefit on the world!

The population is reducing during this horrible virus but this community needs to stay positive and happy because soon there will be a cure and the virus will stop. The community should help the ecosystem reach its best state so that we can be a happy and healthy world.
