How many people took the survey is important when considering survey results. If fewer than 25% of students, parents, or teachers took the survey, the results may not be generalizable.

What do the numbers mean?
The surveys collect feedback from parents, students, and teachers. Survey questions relate to five topics important to school improvement. The more positive the feedback received, the higher the “score.” The highest score for each topic is 10, which would mean that everyone selected the most positive choices for all questions about that topic.

Sample question:
How often is this statement true? “I enjoy being in school.”

0 Never 5 Rarely 10 Occasionally Most or all of the time

How positive was the feedback?

How does feedback compare across survey takers?

Research shows that the five topics above are closely related to school improvement. The overall column shows the combined score across all survey takers and is the same value shown in the radar plot (top right). The other columns show the average score for each surveyed group.

Questions to Consider: In what key area is your school rated the highest? The lowest? How do different groups rate similar topic areas? What actions will you take as a result of this feedback?

Turn to page 2 to see this school’s survey results over time, as well as information about the sub-topics that make up these 5 areas.
## What are the trends in feedback over time?

The values in the chart above indicate the overall topic score for each (color-coded) topic each year. Upward movement shows improvements while downward movement reflects declines.

**Questions to Consider:** Are the lines trending up or down? How does this pattern align with the areas where your school has been making the most effort?

### Feedback by Sub-topic and Group

Each topic contains many sub-topics. The tables below show the scores for each sub-topic and follow the color codes from page 1.
