

THE SCHOOL DISTRICT OF
PHILADELPHIA

The Spotlight

***A newsletter that recognizes individuals
who strive for excellence in safety***

The Office of Risk Management (ORM) and PMA Companies Risk Control work collectively with each of you to ensure an effective safety program and culture for the school district. We work to increase the understanding needed to protect school staff members and students while performing everyday tasks with the goal of reducing exposures and incidents so that everyone returns home safely.

In this issue we would like to shine “The Spotlight” on an individual who works hand in hand with ORM and PMA to contribute to everyone’s safety: **Micah Chrisberg**. Micah is a building engineer who recently worked at G. W. Carver Engineering & Science and is now located at William Bryant School. He has made an incredible impression on everyone because of his demeanor and positive attitude. When you come across someone like Micah who makes a difference to not only you but to everyone they encounter for the right reasons, they should be recognized for those efforts.

Micah has continually ensured safe and smooth operations for both students and staff no matter where he has been located during his career with the School District of Philadelphia. During a recent visit by PMA Risk Control to G.W. Carver, staff shared many wonderful comments and requests for him to stay there at any cost because of the “fabulous” work he does and the professional way he interacts with the entire staff.

Relocating to new schools is never easy for a child and doing so as an adult can be intimidating as well. Micah continues to blend in at every location he has been assigned to with ease. Managing the Facilities staff while maintaining the building can be overwhelming when relocating, and for Micah it comes as second nature already in his young career.

We congratulate Micah on this recognition and wish him well in his future endeavors!
