

Below are the bus cleaning and disinfecting protocols for Total Transportation. Buses will be cleaned with EPA-approved cleaners.

- All buses will be deep cleaned and sanitized prior to the first day of school.
- Prior to the bus being put in service for the day, the staff will disinfect the bus seats and frequently contacted surfaces.
- After the unloading of the 1st load of students, and performing the child safety check, the driver and staff will start from the rear of the bus and spray and wipe all high-contact areas with disinfectant cleaning solution. Seat belts, car seats, and harnesses will be wiped down as well.
- The 2nd load of students will be assigned seats not occupied in the first run. Cleaning procedures, following the child safety check, performed after the first load of students will be performed following drop-off of the second load as well.
- At the end of each day, drivers and staff will, after performing the child safety check: Remove any items from the floor or vehicle seats, spray and wipe down all high-contact areas of the bus, wipe down seat belts, harnesses, and car seats, spray and wipe all heating and air conditioning vents, window glass, door glass, and driver's cockpit.
- Once per week, all buses will be fogged using an EPA approved fogger as an added sanitation and disinfection measure.
